

BOSS Sealed Expansion Vessel Overview

Description:

The BOSS Sealed Expansion Vessel is intended for use on sealed heating and chilled systems. The vessel is comprised of a high strength steel shell and butyl rubber diaphragm. Sealed systems maintain the operating pressure in heating and cooling systems, by using an expansion vessel to accommodate any expansion or contraction caused by system temperature changes.

Certifications and Standards Applied:

- PED 97/23/EC
- CE Approved
- BS 4814:1990

Maximum Operating Conditions:

- Min. working temperature: -10 °C
- Max. vessel temperature (diaphragm): 70 °C.
- Max. supply temperature (boiler): 90 °C.
- Max. working temperature (design): 120 °C.

Common Product Features:

- Easy to install with long service life
- Suitable to be used in large and small systems
- Fixed diaphragm
- Nitrogen air valve counter sunk in with protective cap

Application of Use:

- Heated water systems
- Chilled waters

Dimensions:

Type	Pre Charge (Bar)	Maximum Working Pressure (Bar)	Volume (l)	Dimensions (mm)			Connections (BSP M) (G)	Weight (Kg)	Order Code
				Diameter ϕ A	Height B	ϕ C			
BOSS 2 Litre	0.5	3	2	216	144	-	3/4"	1.7	19711008

2 - 25 Litres

35 - 80 Litres

110 - 1000 Litres

Installation & Placement:

To ensure that the temperature at the BOSS diaphragm does not exceed 70°C (system flow <90°C), the vessel should be installed on the coldest part of the system, (typically the return pipe to the heat exchanger). For systems running at elevated temperatures (90°C flow), an intermediate vessel may be required to provide additional heat dissipation.

Mounting of the BOSS vessels

- 2 – 25 Litres Vessels are to be mounted by means of a suspension bracket (MB 2)
- 35 – 80 Litres Vessels are to be mounted with the feet on the wall or upright on the bottom
